

# WASEEM ISMAIL

FULL STACK SOFTWARE DEVELOPER | .NET CORE | ANGULAR | CLOUD & ENTERPRISE SYSTEMS  
+94 77 494 2950 | mowaseem231@gmail.com | Colombo, Sri Lanka | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

## PROFILE SUMMARY

Full Stack Software Developer with 2+ years of experience developing enterprise applications using C#, .NET Core, ASP.NET MVC, Angular, and MS SQL Server. Experienced in building RESTful APIs, optimizing SQL stored procedures, resolving production issues, and delivering ERP features across inventory, sales, and finance domains. Skilled in Docker, CI/CD, AWS deployment, Agile/Scrum delivery, and secure coding practices. Also experienced in AI/ML and LLM-based tools, including document assistants, summarization pipelines, and agentic workflows.

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                     |

|--------------------------------------------------------------------|-------------|
| <b>BSc (Hons) in Information Technology – Software Engineering</b> | 2021 – 2025 |
| Sri Lanka Institute of Information Technology (SLIIT)              |             |

## TECHNICAL SKILLS

|                        |                                                                                            |
|------------------------|--------------------------------------------------------------------------------------------|
| <b>Backend:</b>        | C#, .NET Core, ASP.NET MVC, Web API, Entity Framework, Node.js, Express — REST API design  |
| <b>Frontend:</b>       | Angular (TypeScript), React, JavaScript, HTML5, CSS3, Bootstrap                            |
| <b>Databases:</b>      | MS SQL Server (stored procs, optimisation, indexing), PostgreSQL, MongoDB, MySQL, Firebase |
| <b>Cloud / DevOps:</b> | AWS, Docker, CI/CD pipelines, GitHub workflows, Azure DevOps (familiar)                    |
| <b>Security:</b>       | Secure-by-default design, auth patterns, input validation, OWASP awareness                 |
| <b>AI / LLM:</b>       | Python, LLM agent workflows, MCP server, OpenAI API, Claude API, Prompt Engineering        |
| <b>Testing:</b>        | xUnit, unit testing, UAT support, Quality Engineering practices, test data management      |
| <b>Practices:</b>      | Agile/Scrum, OOP, Design Patterns, clean code, code review, technical documentation        |

KEY PROJECTS

---

Enterprise E-Commerce Platform

- Built a .NET Core Web API with React admin portal role-based access control, JWT authentication, product catalogue, order processing, and notifications; REST endpoints follow repository pattern and secure-by-default principles.
- Containerised with Docker, deployed to AWS via CI/CD pipeline with automated build, test, and release stages; environment-based config and structured logging for production observability.

Stack: C#, .NET Core, React, MongoDB, Docker, AWS

DocuAgent — Agentic LLM Document Assistant with MCP

- Designed an agentic application with intent-based tool routing classifying queries and dispatching to the correct AI workflow (Q&A, summarisation, quiz generation) using structured prompt engineering and context retrieval.
- Built a custom MCP server (MCP Python SDK) exposing document tools compatible with Claude and Cowork agents; engineered a swappable LLM provider layer supporting OpenAI, Anthropic Claude, and Gemini with zero core logic changes.

Stack: Python, Streamlit, OpenAI API, Claude API, MCP Python SDK, Prompt Engineering

AI Meeting Summaries & Sentiment Analysis

- End-to-end production NLP pipeline: audio ingestion (FFmpeg), speech-to-text transcription (Whisper, ~78.3% WER accuracy), abstractive summarisation (T5), and multi-class sentiment classification (Hugging Face Transformers).
- Deployed as a Docker-containerised Flask REST API auto-producing formatted meeting minutes and SRS documents from raw audio — eliminating manual documentation effort; research outcomes published in peer-reviewed journal.

Stack: Python, Flask, Whisper, T5, Hugging Face Transformers, MongoDB, Docker

Keratoconus Disease Detection

- Production AI diagnostic system using a custom CNN trained on corneal topography images achieved 93.65% classification accuracy; deployed as a real-time Flask REST API with a React frontend and Docker containerisation.
- Full pipeline from image preprocessing and augmentation through model inference to structured clinical output; research recognised for clinical applicability of deep learning in early-stage ophthalmic disease detection.

Stack: Python, TensorFlow, Keras, Flask, React, Docker

PUBLICATIONS

---

AI-Driven Contextual Summarization and Sentiment Analysis for Automated Project Documentation in Agile Meetings  
*Tuijin Jishu / Journal of Propulsion Technology · Apr 2025*

Built an NLP pipeline using Whisper, T5, and Hugging Face Transformers to auto-generate meeting minutes and SRS documents from raw audio recordings. Deployed as a production REST API; research demonstrated measurable reduction in manual documentation time for Agile teams.

A Web-Based Application for Keratoconus Detection  
*Tuijin Jishu / Journal of Propulsion Technology · Dec 2023*

Developed a CNN-based diagnostic system for early-stage Keratoconus detection from corneal topography images, achieving 93.65% accuracy. Deployed as a production REST API; research recognised for clinical applicability of deep learning in ophthalmic disease detection.
